

## Lentes del Caribe S.A. new user of ZED Mariel

February 27, 2018 ZED Mariel Office

Lentes del Caribe S.A., a subsidiary of Corporación Siete from El Salvador will build in Mariel Special Development Zone a facility for the production and wholesale distribution of ophthalmological products, using FREE FORM technology for the carving of lenses.

FREE FORM is a free technology that uses a generator assisted by a computer and three axis with diamond tip, able to place any desired curve in the lens. With this technology lenses are designed in accordance with the patientâ | s requirements, face and frame parameters.

What makes FREE FORM development totally different is its capacity to produce lenses with 0.01 diopters accuracy, which is a significant improvement from the conventional technology used in labs, which have an accuracy error of +/- 0.12 diopters.
